DIM-ICE, flow, density and the 3 Ds

How long?

Level ground: about 82 a metre a minute. Steps: about 66.

Minutes = people ÷ (width × 82 or 66). At best.

Slower up stairs, at turns, with families, near kiosks, in bad weather.

The narrowest point sets the pace. Use its width.

Time, not capacity. Never exceed area capacity.

Report early, with the numbers. Ask for space or time.

Your DIM-ICE walk

Design, Information, Management × Ingress, Circulation, Egress.

Normal days and emergencies. Every cell.

Each cell: what could go wrong? My control? Who do I tell?

Design problems: report early, with your estimate.

Information and Management: often yours. Brief it.

Put the answers in your briefing, your area check, your decision log.
